WHAT A POLIFLEXY® POST IS FOR?

Preventive signalise, flexible post, special for delimit or mark danger zones, aligner indicators, or for singalise dangerous zone, and at the same time, better the visibility of the risk area.

Its main function is avoid the passage of vehicles to forbidden zones, also for control pedestrian traffic.

FEATURES

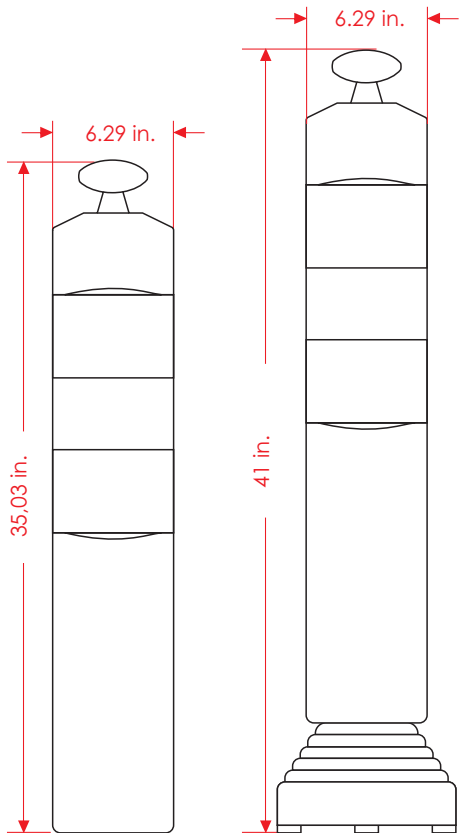

- One of its remarkable features is its flexible body and -at the same time- is high impact resistant, it receives hits and just return to its original form.
- Cylindrical body with a handle atop for better manipulation, and an eyebolt for put a plastic chain or caution tape in it.
- This post has the option to carry a heavy PVC base, to become mor stable and then works as mobile signalling.
- In case of light-weight base is possible to fill it with sand to get desirable stability to resist strong wind.
- Manufactured out in Poliflexy®, material very malleable that is completely harmless to vehicles.
- Line color: yellow, white or orange of great visibility (more colors on demand).
- 2 reflective rings prismatic quality for the best visibility during nights.
